HEADLINE

Software engineer, AI educator & builder | Inspire mentor | Open-source tools | AI safety research & voice interfaces

ABOUT

I build software and help people understand what they can do with AI.

My work spans more than 30 years of web, mobile and data applications, including healthcare systems, business intelligence and tools for large organizations. That background shapes how I approach AI: start with what someone needs, build something useful, and look carefully at whether it works.

Over the past few years, I've mentored high school students in AI through Inspire, delivered talks and lectures, and helped small businesses and mayoral candidates learn about AI and integrate it into their work. I also share open-source projects and practical experiments, create educational content, and appear as an expert guest on podcasts. On X, I contribute to conversations around Claude, coding tools and AI safety.

AI safety is now a central focus of my work. Through The Alignment Hypothesis, I'm exploring whether persistent consequences, relationships and opportunities for correction could help us develop better-aligned AI systems. I'm refining these ideas into practical experiments with meaningful baselines and room for findings that challenge the proposal. Initial research tools are in place; the model pilot has not run.

I'm also building Titus and Go Screenless: tools for coordinating work across AI systems and interacting with them through voice. The phone/Watch prototype and listening inbox are in place, while the complete voice-to-agent-to-spoken-response loop is being integrated and tested. Alongside the engineering, I want to measure when bringing different models together improves the work and when one strong model is the better choice.

I welcome conversations about AI education, useful open-source tools and careful experiments that could contribute to AI safety.

SELECTED EXPERIENCE COPY

AI Consultant and Tool Developer | Self-employed / Contractor

2020 - present

I develop AI tools and retrieval-augmented applications for healthcare, education, nonprofit and business users. My work combines software development with mentoring, speaking and practical adoption support.

- Mentor high school students in AI through Inspire and deliver talks, lectures, workshops and demonstrations.
- Help small businesses and mayoral candidates understand AI and integrate it into their work.
- Create open-source projects and educational content, appear as an expert podcast guest, and contribute to the AI community on X.
- Founded gptprime.ai and built custom GPTs and retrieval tools for specialized information needs.
- Current independent projects include The Alignment Hypothesis, Titus and Go Screenless. Research and prototype stages are described in the About section.

Senior Consultant | Bardess Group, Ltd.

2017 - 2019

Designed and delivered business-intelligence applications using Qlik, natural-language processing, server-side extensions, Node.js, React and Python. Built a voice-to-intent visualization solution for Verizon executives and automated cloud deployments in Azure and AWS. Additional contract consulting from 2020 included enterprise and government visualization work and React components for Condé Nast.

Mobile Application Architect | ETMC Regional Healthcare System

2009 - 2017

Worked with clinicians on patient-facing mobile applications, hospital websites and internal portals. Created an iPad application used in board meetings for seven years, software-deployment tools serving more than 7,000 computers, and an application to help patients with limited movement communicate.

Chief Technology Officer | Global Point Data, Inc.

2001 - 2004

Designed subscription-based service-management software for technician assignment, work review, invoicing and customer payments. Built a Palm OS technician application integrating barcode scanners, printers, cameras, modems and GPS peripherals.

Earlier independent software engineering

Self-employed / Contractor | 1994 - 2022

Developed websites, backend services, databases and native applications across healthcare, education and other industries, overlapping the employed and consulting roles above.

EDUCATION

M.S., Computer Science | University of Texas at Tyler | 2011

B.A., Health & Kinesiology, summa cum laude | University of Texas at Tyler | 2009
