

Eric Buess

Software engineer, AI educator and builder

GitHub: ericbuess | X: @EricBuess

PROFILE

Software engineer with more than 30 years of experience building web, mobile and data applications across healthcare, business and government. Helps people understand and use AI through consulting, mentoring, talks and open-source work. Current focus: practical AI safety research and voice interfaces for working with coordinated AI tools.

CURRENT WORK

AI Consultant and Tool Developer | Self-employed / Contractor

2020 - present

- Build AI tools and retrieval-augmented applications for healthcare, education, nonprofit and business users, drawing on full-stack engineering and AI platform APIs.
- Mentor high school students in AI through Inspire; deliver talks, lectures, workshops and demonstrations that make emerging tools easier to understand and use.
- Help small businesses and mayoral candidates learn about AI and integrate it into their work.
- Share open-source projects, practical experiments and educational content; appear as an expert podcast guest and contribute to an audience on X around Claude, coding tools and AI safety.
- Founded gptprime.ai and developed custom GPTs and retrieval tools for specialized information needs.

SELECTED RESEARCH AND PROJECTS

The Alignment Hypothesis | Independent research

Developing testable proposals around persistent consequences, relationships and opportunities for correction in AI training environments. Work with AI collaborators includes an initial synthetic environment, scoring tools and a prepared reporting-and-correction pilot, with conventional baselines and explicit treatment of negative results.

Stage: proposal and initial research tools; the model pilot has not run and no alignment benefit is established.

Titus and native-agent coordination | Development work

Developing task, source, review and response records across native AI tools. Use recorded critiques and local conformance tests to investigate context loss, delivery failures and when collaboration between models adds value.

Stage: implemented components and local tests; reliable unattended operation across hosts remains under development.

Go Screenless | Voice-interface prototype

Building an Apple Watch / iPhone interface for voice capture and spoken AI responses, with pendant input also planned. A native phone/Watch prototype and a listening inbox are in place.

Stage: the complete capture-to-agent-to-spoken-response loop is being integrated and tested.

ENGINEERING EXPERIENCE

Senior Consultant | Bardess Group, Ltd.

2017 - 2019

- Designed and delivered business-intelligence applications using Qlik, natural-language processing, server-side extensions, Node.js, React and Python for large organizations.
- Built a voice-to-intent data-visualization solution for Verizon executives and automated cloud infrastructure deployment in Azure and AWS.
- Delivered additional contract consulting from 2020, including custom visualization work for enterprise and government users; developed React components for Condé Nast.

Mobile Application Architect | ETMC Regional Healthcare System

2009 - 2017

- Worked with clinicians on native patient applications for emergency routing, documentation and medication tracking, alongside hospital websites and internal portals.
- Created an iPad application used in board meetings for seven years and tools for deploying software to more than 7,000 computers.
- Built an application to help patients with limited movement communicate.

Chief Technology Officer | Global Point Data, Inc.

2001 - 2004

- Designed and delivered subscription-based service-management software for technician assignment, work review, invoicing and customer payments.
- Built a Palm OS technician application integrating barcode scanners, receipt printers, cameras, modems and GPS peripherals.

Software Engineer | Self-employed / Contractor

1994 - 2022

Built websites, backend services, database solutions and native applications across healthcare, education and other industries. Work overlapped the employed and consulting roles above.

EDUCATION

M.S., Computer Science | University of Texas at Tyler | 2011

B.A., Health & Kinesiology, summa cum laude | University of Texas at Tyler | 2009

TECHNICAL STRENGTHS

AI APIs and tool integration; retrieval-augmented generation, embeddings, hybrid search and reranking; Python, JavaScript, Node.js, React and Qlik; full-stack and native application development; Azure, AWS, Google Cloud, Docker and Kubernetes; Git, deployment automation and data visualization.
